

BEAVER ADAPTATIONS

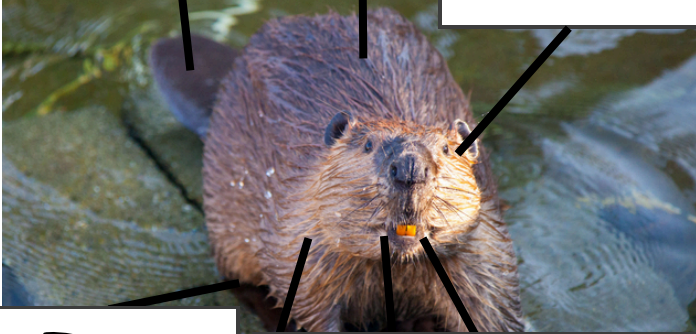

two coats of fur: one for warmth, one for staying dry

tail acts as a danger-alarm, rudder, kick-stand, and fat-store for winter

a transparent set of eyelids acts as goggles

webbed back feet for swimming

teeth are strong in the front and softer in the back so they sharpen themselves as they chew on wood

beavers can hold their breath underwater for up to 15 minutes

an extra set of lips close behind teeth, so beavers can carry sticks underwater

THANKS FOR LEARNING ABOUT BEAVERS WITH THE METHOW OKANOGAN BEAVER PROJECT!

COLOR ME IN!

METHOW OKANOGAN
 BEAVER PROJECT

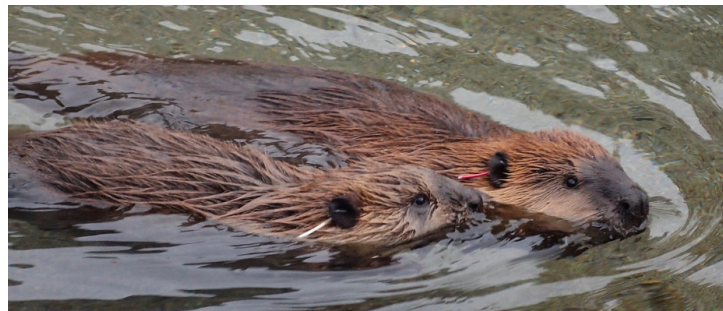

DID YOU KNOW?

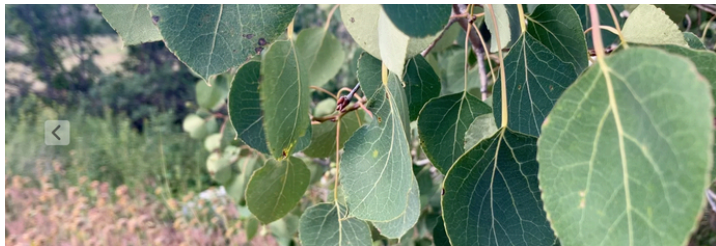

Beavers use sticks and logs to build dams across streams, creating ponds and lush, green areas called **wetlands**.

These wetlands become important **habitat** for wildlife. A habitat is a home for plants and animals that has everything they need to survive.

A baby beaver is called a **kit**. Kits stay with their family for 2-3 years before they move to habitat nearby to start their own family

Beavers don't eat fish! They only eat plants and their favorites include willow, aspen, and cottonwood.

BEAVER	SALMON
WILLOW	METHOW
WETLAND	LODGE
TAIL	RIVER
DAM	OKANOGAN
HABITAT	ASPEN
CHEW	CREEK
POND	KIT
